

msg Load and Performance Testing Service

DOES YOUR PRODUCT MEET THE PERFORMANCE EXPECTATIONS OF YOUR CUSTOMERS?

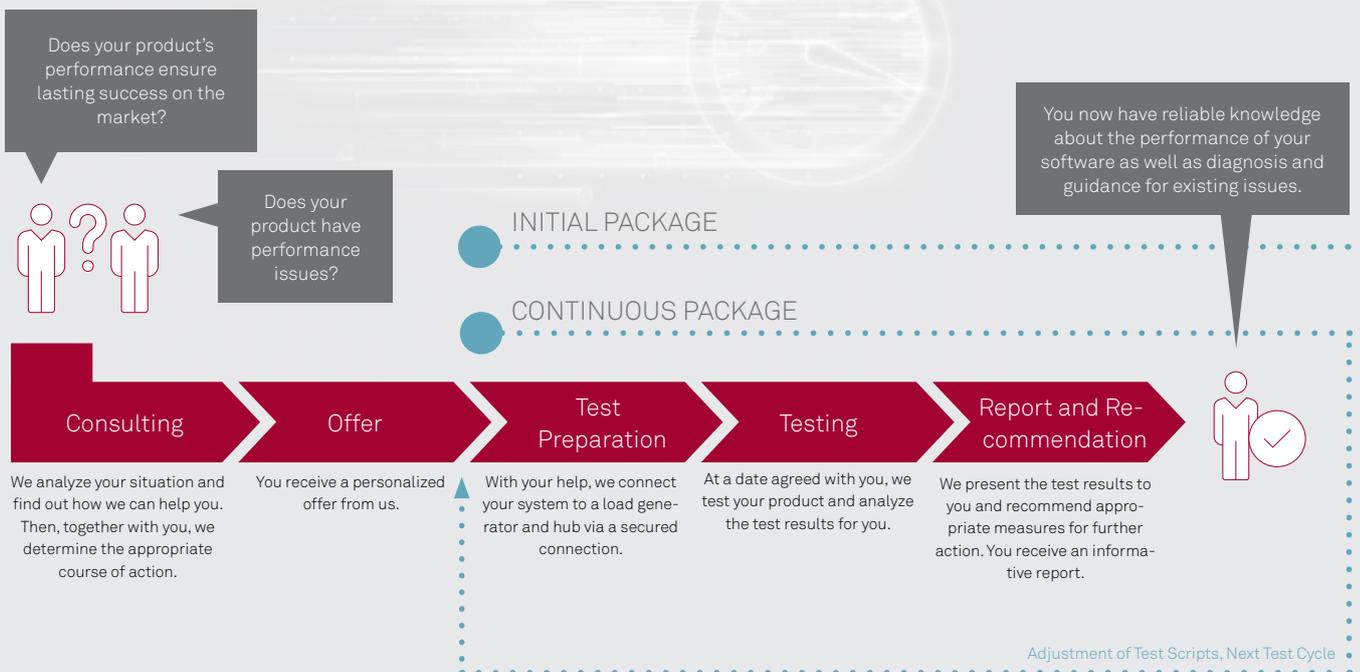

The msg Load and Performance Testing Service gives you clarity in advance of your product launch.

Our ISTQB-certified testers bring you technical expertise, extensive transversal business competences and a ready-to-use test infrastructure. This enables us to develop the right solutions for your requirements, quickly and precisely. Irrespective of the technical connection to be implemented or which software is to be tested under which load: With suitable tests, we test the performance of your application systems for you, identify performance bottlenecks and, in the end, provide you with valuable guidance on:

- Smooth and fast application processes even with numerous, simultaneous accesses
- Short wait and response times
- Further performance criteria according to ISO 25010

You benefit from the convenient combination of tool and consulting. While you take care of your core business, we support your requirements with our infrastructure and test handling. After in-depth consulting, you can easily ensure at an early stage that your applications meet your customer's expectations and provide an ideal user experience. This minimizes risks and contributes significantly to your success.

CUSTOMER JOURNEY

msg LOAD AND PERFORMANCE TESTING SERVICE

YOUR BENEFITS

Speed

You get fast results because our agile team is on standby and is there for you at short notice.

Full Service

You enjoy the benefits of comprehensive consulting, technology, infrastructure, testing and analysis from a single source.

Concise Analysis

You get a summary of all relevant values and KPIs in a report. This gives you a quick overview of your application's performance.

Reliable Cloud Solution

Almost independent from the environment and load, you benefit from flexible and individual solutions. msg's test infrastructure contains all the necessary tools for successful performance testing of your application systems.

Risk Mitigation

You know exactly how well your application performs even before its market launch. This way, you can react early to potential problems and can face the go-live with confidence.

Multilevel Performance Tests

Authentic tests at user and system level provide a comprehensive insight into the user experience with your application.

Service Packages

INITIAL PACKAGE

You want to launch your project on market soon and quickly require performance tests? The Initial Package comprises:

- Short-term start without lengthy test design
- A single test cycle
- Extensive tests at system level
- First results in just a few weeks
- A single analysis with report

CONTINUOUS PACKAGE

You are at the beginning of your project and want to integrate performance tests into your project in the long term? The Continuous Package comprises:

- Extensive joint test planning and test analysis for long-term cooperation
- Regular or repeat test cycles, as required
- Comprehensive tests at system and user level
- Further adaption of the tests in parallel to the product development and testing of the latest version of your software

Combination

Even if you start with the Initial Package, you can switch to the Continuous Package right after the first test cycle and have the performance of your application tested on a recurring basis.
