

RANtor

Your network
quality at a glance

convenient. reliable. affordable.

Do you use wireless networks for your critical business and operational processes?

Monitor your network quality with RANtor

Wireless networks are already replacing the communication infrastructures of many companies. Fast cellular standards in particular offer high data bandwidth and low latency. Until today, the measurement capabilities of the network elements have been used to monitor mobile network quality. As an alternative, cost-intensive probing systems are established with complex data analysis requirements and costly infrastructure integration efforts.

RANtor is the first holistic solution for your company that ensures convenient, reliable and affordable monitoring of network quality. Easy access via web interface to your RANtor

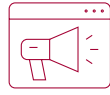

dashboard, with your critical network values and KPIs. An integrated alarm function enables you to respond promptly to minimize costly downtime for your business-critical processes. RANtor measurement probes are distributed in your area of interest and communicate with a measurement server, to coordinate measurements and act as a data relay to our data analysis cloud.

msg customers are already successfully using RANtor as Software / Product as a Service (SaaS / PaaS). Among other things, we provide you with independent consultancy services, if you wish.

Service portfolio of RANtor

Browser-based dashboard

Alarming in case of failures or threshold violations

Periodic KPI report for a holistic overview

Monitoring of network quality

Verification of defined KPIs

Integration also in campus networks

Your benefits with RANtor

- 1** Intuitive and convenient dashboard
For a direct overview of your measurement data
- 2** Reliable cloud solution
For integrating your data analysis via web access
- 3** Affordable terminals
Thanks to a Raspberry Pi-based solution
- 4** Location-based network monitoring
For targeted optimization of your business processes at the point of use
- 5** Modular adjustment options
To meet your individual requirements
- 6** Data processing in Germany
For your data to be handled in line with GDPR

Would you like a non-binding presentation? We invite you to check out RANtor for yourselves.
